

Kian Light

BSc (Hons) Geography, University of Bristol | kian.light@hotmail.com | 07494166091 | Congleton, Cheshire

PROFESSIONAL SUMMARY

Geography graduate (University of Bristol, 2:1, RGS Accredited) with experience managing and analysing environmental and flood risk datasets, including direct experience in probabilistic flood exposure modelling. Comfortable working with data from multiple sources (fieldwork, Freedom of Information requests, and open datasets) and producing clear, reliable outputs for both technical and non-specialist audiences. Confident using GIS (QGIS) and R, with a keen interest in developing further skills in Python and SQL. Strong organisational skills, used to work independently and collaboratively within a team to deliver work on time and to a high standard.

KEY SKILLS

- **Data management & analysis:** cleaning, integrating, visualising, and statistical testing data sourced from a variety of sources (UKCEH, GloFAS, WorldPop)
- **GIS (QGIS):** raster reclassification, batch analysis across probabilistic ensembles, uncertainty mapping, and buffer and zonal statistics
- **Statistical analysis (R):** descriptive statistics, regression, ensemble analysis, EDA; keen to build on this with Python and SQL
- **MS Office:** Data processing and reporting in Excel
- **Flood risk & hazard data:** direct experience combining hazard, exposure, and population datasets to model and communicate flood risk
- **Clear communication:** translating technical data into accessible outputs for non-specialist audiences; strong organisational skills managing multiple simultaneous projects

RELEVANT PROJECT EXPERIENCE

Flood Exposure Mapping & Emergency Bulletin, Mozambique (Cyclone Freddy)

Mar to Apr 2026

- Modelled population exposure to flooding by combining hazard data (Fathom) with population datasets (WorldPop) across 51 probabilistic GloFAS ensemble members
- Processed and analysed ensemble outputs in R (mean, median, 90th percentile, standard deviation) before reimporting into QGIS for uncertainty mapping
- Applied Jenks classification and zonal statistics to produce clear cartographic outputs communicating exposure and uncertainty
- Produced a concise and non-technical 3 page bulletin translating complex flood risk data into information for a time pressured audience applicable for decision making

River Avon Water Quality, Undergraduate Dissertation

Oct 2025 to Apr 2026

- Managed and integrated datasets from multiple sources: primary field sampling, a Freedom of Information request to Bristol City Council, and UKCEH Land Cover Maps
- Identified and resolved data quality issues, including differing spatial resolutions and inconsistent land use categorisation, before including datasets in analysis
- Applied statistical and spatial analysis in R and QGIS to deduce evidence based conclusions from a wide variety of data sources

Microplastic Pollution Assessment, Trout in the Trym Partnership

Sep to Dec 2025

- Compiled and managed a combined dataset of microplastic, *E. coli*, and nutrient data for statistical analysis in R
- Converted site data into spatial objects and built an interactive Leaflet web map to share findings clearly with a partner organisation
- Worked as part of a 5 person team, adapting task allocation to keep fieldwork on schedule when a team member was unexpectedly unavailable

VOLUNTEERING

Water Guardian (Bristol Avon Rivers Trust and Wessex Water)

Sep 2025 to June 2026

- Regular site monitoring and structured data collection supporting catchment management initiatives
- Transferring to similar volunteering position following relocation

EMPLOYMENT

Front of House, Top Table Weddings and Events

Apr 2021 to Jan 2025

- Client facing experience in fast paced, high stakes environments, working to tight deadlines across multiple priorities
- Strong interpersonal and collaborative skills, coordinating with colleagues and guests

EDUCATION

University of Bristol — BSc (Hons) Geography, 2:1, RGS Accredited

Sep 2023 to Jun 2026

- Relevant modules: Spatial Modelling, Flood and Flows in River Basins, Environmental Risk and Disaster Risk Reduction, Quantitative Research Methods, Lab and Field Research Methods, and Dissertation

ADDITIONAL INFORMATION

- Full clean UK Driving License
- Portfolio of GIS, flood risk, and R projects available upon request
