

Kian Light

BSc (Hons) Geography, University of Bristol | kian.light@hotmail.com | 07494166091 | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Geography graduate (University of Bristol, RGS Accredited) with hands-on experience managing, cleaning, and analysing environmental and flood risk datasets, including direct experience in probabilistic flood exposure modelling. Comfortable working with data from multiple sources — fieldwork, Freedom of Information requests, and open datasets — and turning it into clear, reliable outputs for both technical and non-specialist audiences. Confident using GIS (QGIS) and R, with a keen interest in developing further skills in Python and SQL. Strong organisational skills, used to working independently and collaboratively within a team to deliver work on time and to a required standard.

KEY SKILLS

- Data management & analysis — cleaning, integrating, and quality-checking datasets from fieldwork, FOI requests, and open sources (UKCEH, GloFAS, WorldPop)
- GIS (QGIS) — spatial data handling, buffer and zonal statistics, multilayer overlay mapping, uncertainty mapping
- Statistical analysis (R) — descriptive statistics, regression, scenario/ensemble analysis; keen to build on this with Python and SQL
- Standard IT packages — Excel-based data processing and reporting
- Flood risk & hazard data — direct experience combining hazard, exposure, and population datasets to model and communicate flood risk
- Clear communication — translating technical data into accessible outputs for non-specialist audiences; strong organisational skills managing multiple concurrent projects

RELEVANT PROJECT EXPERIENCE

Flood Exposure Mapping & Emergency Bulletin — Mozambique (Cyclone Freddy)

Mar – Apr 2026

- Modelled population exposure to flooding by combining hazard data (Fathom) with population datasets (WorldPop) across 51 probabilistic GloFAS ensemble members
- Processed and analysed ensemble outputs in R (mean, median, 90th percentile, standard deviation) before reimporting into QGIS for uncertainty mapping
- Applied Jenks classification and zonal statistics to produce clear cartographic outputs communicating exposure and uncertainty
- Produced a concise, non-technical 3-page bulletin translating complex flood risk data into decision-relevant information for a time-pressured audience

River Avon Water Quality — Undergraduate Dissertation

Oct 2025 – Apr 2026

- Managed and integrated datasets from multiple sources: primary field sampling, a Freedom of Information request to Bristol City Council, and UKCEH Land Cover Maps
- Identified and resolved data quality issues, including differing spatial resolutions and inconsistent land use categorisation, before including datasets in analysis
- Applied statistical and spatial analysis in R and QGIS to draw well-reasoned conclusions from a wide variety of data sources

Microplastic Pollution Assessment — Trout in the Trym Partnership

Sep – Dec 2025

- Compiled and managed a combined dataset of microplastic, E. coli, and nutrient data for statistical analysis in R
- Converted site data into spatial objects and built an interactive Leaflet web map to share findings clearly with a partner organisation
- Worked as part of a 5-person team, adapting task allocation to keep fieldwork on schedule when a team member was unexpectedly unavailable

VOLUNTEERING

Water Guardian — Mersey Rivers Trust (previously Bristol Avon Rivers Trust)

Sep 2025 – Present

- Regular site monitoring and structured data collection feeding into catchment-scale management initiatives, working alongside the Environment Agency
- Maintained continuity of volunteering commitment through relocation, coordinating directly with a new host organisation

EMPLOYMENT

Front of House, Top Table Weddings and Events

Apr 2023 – Jan 2025

- Five years' client-facing experience in fast-paced, high-stakes environments, working to tight deadlines across multiple priorities
- Strong interpersonal and collaborative skills, coordinating with colleagues and clients across a broad range of stakeholders

EDUCATION

University of Bristol — BSc (Hons) Geography, 2:1, RGS Accredited

Sep 2023 – Jun 2026

- Relevant modules: Spatial Modelling, Flood and Slope Processes in River Basins, Quantitative Research Methods, Lab and Field Research Methods, Environmental Risk, Dissertation

ADDITIONAL INFORMATION
